

1. `npx create-react-app appname`

`//create a folder with react components`

2. `npm install -g create-react-app @latest`

`//if you run into some problem`

3. `cd appname`

`//open root folder`

4. `code .`

`//open the folder in VScode`

5. `//create a .js file inside src folder`

6. `//write some function inside that folder`

```
function Kaiwalya(){  
  return(  
    <div>  
      <h1>Hello</h1>  
      <h2>I am Kaiwalya</h2>  
    </div>  
  );  
}
```

`export default Kaiwalya;`

7. `//import and call inside index.js`

`import Kaiwalya from './Kaiwalya';`

```
<React.StrictMode>
  <App />
  <Kaiwalya /> //call
</React.StrictMode>
```

```
8. npm start (in cmd)
   // open in browser
```
